next generation

ultra-high purity nitrogen generators

nitrogen purity: 95% to 99.999%
Leading edge technology and hundreds of years of experience...nano-purification solutions, your world-class manufacturer of state-of-the-art compressed air and gas solutions to industry.

Our commitment at nano is to work alongside our customers and provide unique solutions with the highest quality products to solve your specific challenges.

A wealth of experience and leading edge products are only part of the equation. nano recognize that world-class customer service is the most important component to any successful business.

Experience. Customer. Service... nano

dry and pure
Nitrogen is used in many commercial and industrial applications to improve the quality of a product or process or as a safety measure to prevent combustion. Liquid or bottled nitrogen delivery and storage can be expensive, unreliable and a safety concern. Nitrogen generators allow users to produce nitrogen in-house simply and inexpensively using an existing compressed air system.

nano recognizes the importance of having a safe, reliable and cost-effective supply of high-purity nitrogen. We have developed the GEN nitrogen generator to meet the increasing demand for high quality complete packaged solutions which save energy and time while fulfilling the needs of their intended application.

design
Our experienced team of design engineers are always looking for new and unique technologies and products to bring you the highest level of performance and lowest overall operating cost.

research & development
Our R&D team endeavor to provide solutions that go beyond developing an existing product. They are continually researching new technologies which can provide unique advantages over competitive offerings.

manufacture
The reliable and energy saving nano GEN range of nitrogen generators are manufactured in our state-of-the-art facility to the highest standards of build quality to ensure equipment reliability and high levels of performance.
**GEN$_2$ nitrogen generators**

Nitrogen is a dry, inert gas which is used in many commercial and industrial applications to improve quality or where oxygen may be harmful to the product or processes.

With traditional methods of gas supply such as liquid or bottled nitrogen, users are liable for hidden costs such as rental, refill and delivery, order processing charges as well as an environmental levy charge.

Nitrogen generators use regular compressed air to deliver a continuous supply of high purity nitrogen - offering a cost effective and reliable alternative to the use of cylinder or liquid nitrogen across a wide range of applications.

When you switch to a nano GEN$_2$ gas generator you can expect payback typically between 6 to 24 months. This unique design and energy saving function offers a number of significant advantages over delivered gas options as well as traditional generator designs.

The compact system can be installed easily and with a minimum cost and disruption and requires only a pre-treated compressed air system to start production. An on-site generator enables users to fulfill their demand for nitrogen gas on their premises, under their complete control. As a result, companies can generate as much or as little nitrogen as needed at a fraction of the cost of having the gas delivered by an external supplier.

**benefits**

**guaranteed performance**
- reliable performance based on decades of experience with pressure swing adsorption technology
- 100% function and performance tested at our factory
- 2 year warranty

**rapid return on investment**
- significant cost savings over cylinder or liquid supply provides a typical return on investment of less than 24 months

**easy to install**
- the compact design allows installation in spaces too small for twin tower generator systems

**safe & reliable**
- eliminates the safety hazards of transporting and storing pressurized gas cylinders or liquid nitrogen

**environmentally friendly**
- lower air consumption and refined controls provide greater energy efficiency
- reduces carbon footprint by eliminating gas delivery to your facility

**easy to maintain**
- advanced PLC with HMI touchscreen controls simplify operation and require minimal training
- innovative piston valves significantly reduce maintenance schedules and minimize downtime

**fits any application**
- maximum design operating pressure of 232 psig available
- available in a wide range of flow rates and purities from 95% - 99.999%
- can handle any power supply from 100 to 240 VAC in 50 or 60 Hz, 24VDC optional

**design quality**
- mass flow controller - ensures correct set pressure and flow
- integral oxygen analyzer - continuously measures gas purity
- purity guarantee valve - automatically vents off out of specification gas
- remote monitoring - enables connection to proprietary remote management and generator control systems
The technologically advanced nano GEN₂ nitrogen generator operates on the Pressure Swing Adsorption (PSA) principle to produce a continuous uninterrupted stream of nitrogen gas from clean dry compressed air.

Pairs of dual chamber extruded aluminum columns are filled with Carbon Molecular Sieve (CMS). Joined via an upper and lower manifold, the high density filled columns produce a dual bed system.

Compressed air enters through the inlet manifold (A) to the bottom of the ‘online’ bed and flows up through the CMS to separate the compressed air. The clean and dry air then flows up through the CMS stage (C) where oxygen and other trace gases are preferentially adsorbed allowing the nitrogen to pass through. The nitrogen then passes through the supporting bed layer (D) and outlet manifold (E) to the buffer vessel and a nano F₁ buffer vessel filter before reentering the GEN₂ nitrogen generator for purity monitoring.

After a preset time the control system automatically switches the beds. One bed is always online generating nitrogen while the other is being regenerated.

During regeneration, the oxygen that has been collected in the CMS stage and the moisture that has been collected in the optional integrated dryer stage are exhausted to atmosphere. A small portion of the outlet nitrogen gas is expanded into the bed to accelerate the regeneration process.

Inlet, outlet and exhaust are managed through unique integrated nano piston valves, which are designed for reliability, long service life and ease of maintenance. The generator also incorporates adjustable equalization valves which smooth the column switch over, improve air/ N₂ ratios and extend CMS life. This highly durable valve system is backed by a comprehensive two-year warranty.
Traditional nitrogen generators often require installing and operating an external desiccant dryer. The innovative nano GEN₂ nitrogen generators feature an integrated dryer cartridge which eliminates the need for a pretreatment dryer of any type. The integrated drying system reduces purge loss by approximately 20% and reduces pressure drop by 10 psi or more which provides significant energy savings over a traditional generator system.

**ecomode energy saving control**

This unique control feature utilizes an outlet pressure monitor to reduce energy consumption during periods of low demand to ensure a continuous uninterrupted nitrogen supply while minimizing power consumption.

**multi-bank design**

The unique multi-bank design (GEN2 1110 to GEN2 12130) enables additional generators to be added in the future as demand increases. Your GEN₂ nitrogen generator can grow with your company.

**PLC controlled operation**

Each GEN₂ nitrogen generator is operated by a reliable PLC control system with digital and optional analog outputs for remote monitoring and alarm capabilities. GEN₂ includes an easy-to-operate touch screen graphical interface which offers valuable features including ‘power on’, ‘hours run’, ‘oxygen purity’, ‘pressure’, ‘online column’ and ‘service required’ indicators. In addition, four pressure gauges provide the operator with continuous indication of column A, column B, air inlet and nitrogen outlet pressures.

**maximum corrosion protection**

High tensile aluminum columns are first alucromed and then powder coated to provide maximum protection for corrosive environments.

**oxygen analyzer**

A built in oxygen analyzer continuously monitors the oxygen concentration in the nitrogen stream. Our NEW analyzer utilizes Zirconia Sensor Technology to give a more reliable measurement, faster response time and longer life compared to traditional analyzers. Incorporated into the PLC controls, our oxygen analyzer guarantees downstream purity levels are consistently achieved and maintained.
installation

nano GEN\textsubscript{2} installation

1. compressor
2. wet air receiver
3. pressure relief valves
4. water separator
5. pre filters
6. dryer with integrated dust filter
7. nitrogen generator
8. buffer vessel
9. buffer vessel filter
10. nitrogen outlet

nano GEN\textsubscript{2plus} installation

1. compressor
2. wet air receiver
3. pressure relief valves
4. water separator
5. pre filters
6. nitrogen generator with integrated dryer
7. buffer tank
8. buffer vessel filter
9. nitrogen outlet

nano GEN\textsubscript{2} or GEN\textsubscript{2plus} installation with booster compressor

1. compressor
2. wet air receiver
3. pressure relief valves
4. water separator
5. pre filters
6. optional dryer with integrated dust filter
7. nitrogen generator
8. nitrogen buffer vessel
9. buffer vessel filter
10. nitrogen outlet
11. inlet buffer tank to booster compressor
12. booster compressor
13. mid- or high pressure filters
14. mid- or high pressure nitrogen storage
15. high pressure nitrogen outlet
A major peanut & snack foods packager in the southeastern US needed to reduce their nitrogen gas costs. They turned to nano-purification solutions and their local authorized nano distributor for assistance. nano worked alongside their distributor with the end customer to design a PSA N2 generation system which reduced nitrogen gas costs from $0.52/100 ft³ down to less than $0.10/100 ft³.

Dual GEN2 12130 units produce an impressive 7,840 cfh of nitrogen gas. The modular and expandable design of the nano GEN₂ allows for the customer to simply add modular units as their production increases. The integrated energy efficient ecomode function eliminates the costly compressed air requirement during periods of low or no production.

“We are so impressed with the operation and performance of the GEN₂ units we are looking to add additional modules next year.”

*(without integrated dryer system)*

---

*Unless otherwise specified, nitrogen purity is 99.99% (10 ppm) and the operating pressure is 70 psig (4.9 barg). For other conditions, refer to the correction factors above or contact support@n-psi.com.

1. inlet pressure and temperature
2. 232 psig (16 barg) is available upon request. Consult factory.
3. to be used as a rough guide only. All applications should be confirmed by nano. Contact us for sizing assistance.
4. Manufacturers of CMS (Carbon Molecular Sieve) recommend a pressure dew point of -4°F (-20°C) to maximize air separation capacity and ensure long service-life.
